Person ID	Problem	App/Website found	Likes	Don't likes	Improvements	Age [optional]	Gender [optional]	Education/occupation [optional]	Comments [optional]
1	Picking outfit	Pureple	Versatile, don't have to upload my own clothes, can pick from available similar options. Categorization of clothes is good.	Adds (removed with pro version), slow, crashes somewhat often.	Mostly stability, remove adds/pro version would be better user experience.	24	F	Associates degree in business, Tech Sales	
1	Choosing what to have for dinner	Restaurant Roulette	Useful categories, can make lists of restaurants, can view places you might have not heard of and look at ratings.	Adds (removed with pro version), Places that should show up are not, multiple places they know exist aren't on the lists by default for seemingly no reason.	Somehow include more options as default list. Simpler/faster way to add places to a list. Obviously remove adds.	24	F	Associates degree in business, Tech Sales	
2	Deciding where to live that suits their needs/wants	Teleport.org	Shows options based on some preferences. You can see more about the given options in-app.	Needs more preferences, app should be simpler, too many features that seem unnecessary.	Add more preferences, allow user feedback because this will vary from person to person.	25	M	High School Diploma, Bank Teller Manager	
3	Diet logger	myfitnesspal	Many options for existing foods to log. Very detailed in information for logging.	Clunky UI, difficult to navigate menus.	Simplify app by potentially removing menus and streamlining the experience	22	M	Bachelor of Science in Mathematics	
4	Time organization/planner	Time Planner: Schedule & Tasks	Once you understand how to get setup, the visuals are useful for remembering daily/weekly tasks.	Somewhat complex to set up, not very intuitive.	Simplify user experience, remove any unnecessary menus or features	56	F	Associates degree, Legal Secretary
